

TUNING KNOB ORIENTATION and LOCATION LAYOUT

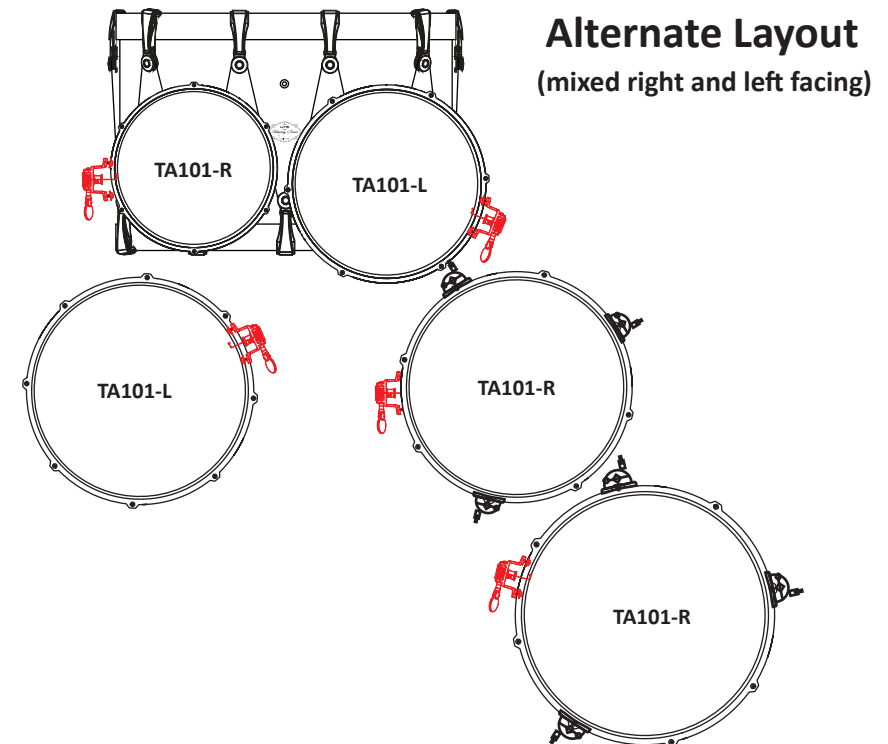

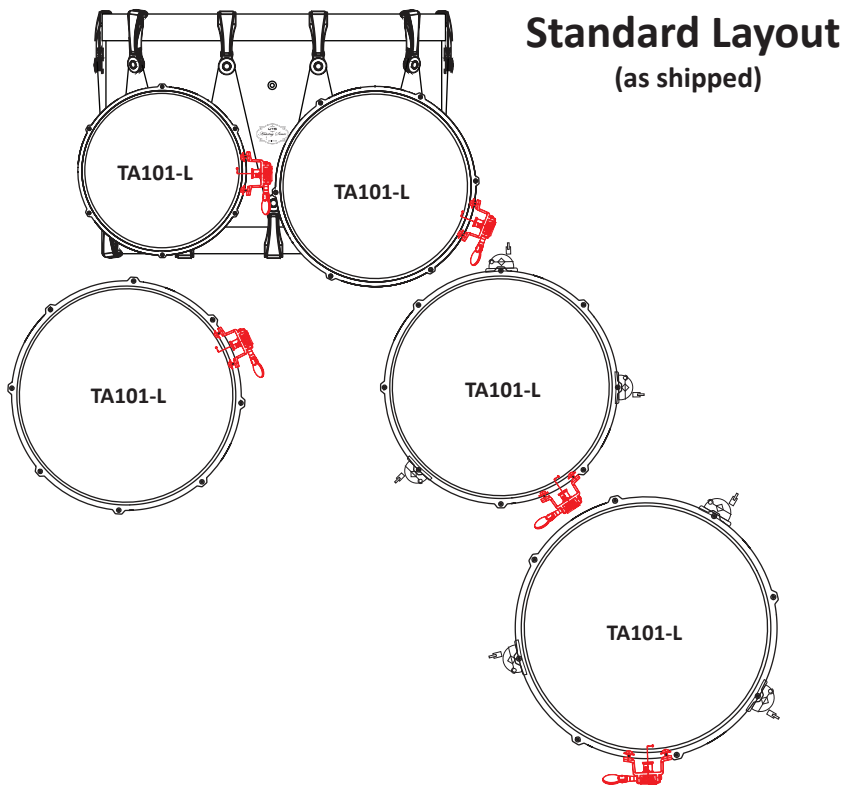

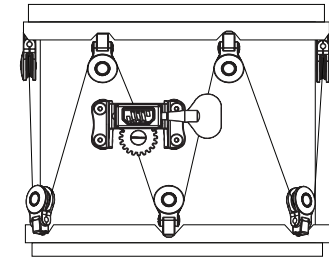

Depending on personal preference, the WTS tuning knob handle can face right or left. **This orientation changes the mounting location on the drum shell**, so be sure to use the appropriate scale layout drawings for your chosen handle direction. All WTS tuning knobs are shipped in the left-facing orientation but can be changed by removing 4 screws on the back side of the tuning knob and changing handle direction. Take care not to over-tighten the screws during reassembly.

We currently offer scale layout drawings for the new Standard Layout and Alternate Layout below. Please contact us with any questions: info@welchtuningsystems.com

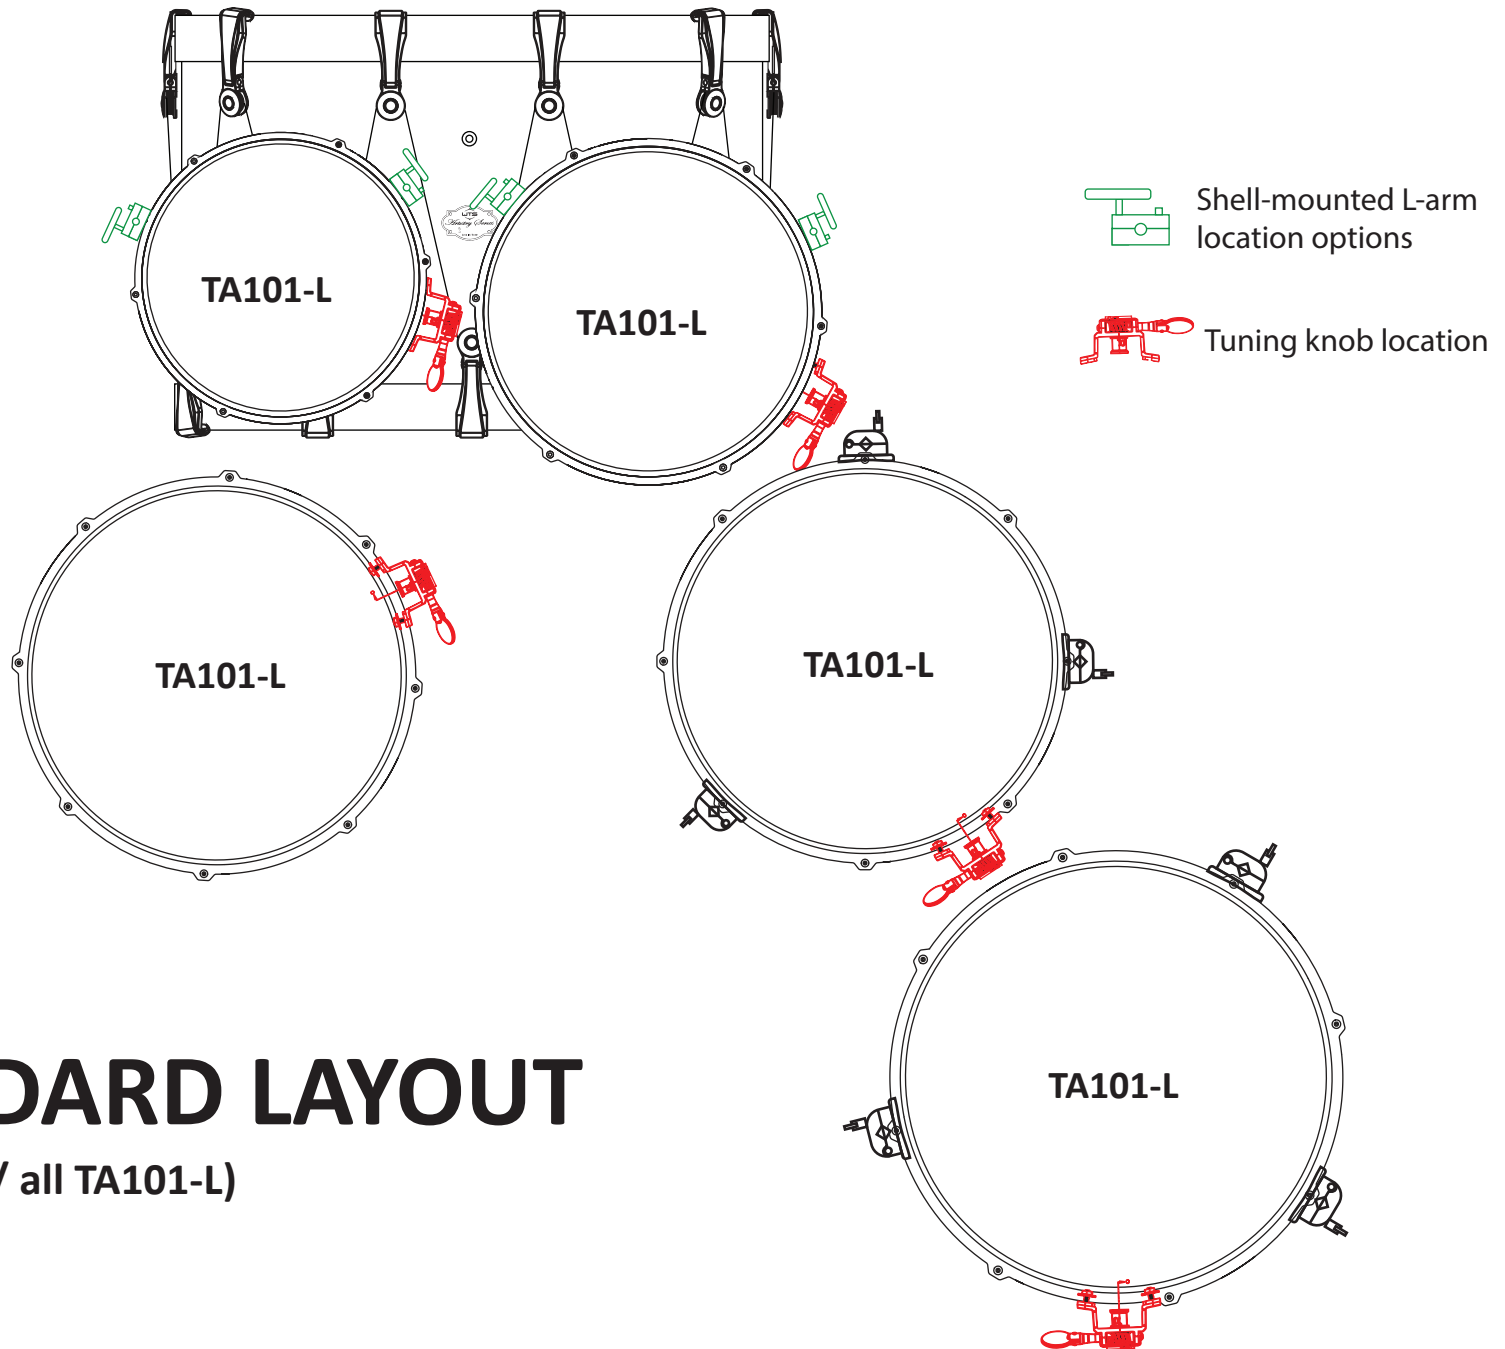

TA101-L (Left-facing)

TA101-R (Right-facing)

The following Scale Layout Drawings are for the new standard Tuning Knob Location
